

FACTS NOT FEAR

COVID SUSCEPTIBILITY

Up to 80% of people have prior immunity from exposure to closely-related coronaviruses protecting them from serious disease.

ZERO COVID

New variants will always emerge as long as there is transmission: The vaccine doesn't stop infection or transmission and the virus can be transmitted among animals. Even if the entire planet is vaccinated, transmission will continue.

MASKS

The data shows mask mandates don't reduce viral spread.

COVID FATALITY RATES

If infected, the average mortality with COVID is similar to the flu at around 0.15% globally. COVID is not Ebola.

LONG COVID

Experiencing longterm symptoms for high-risk individuals following severe illness is common with all respiratory viruses, including the flu.

COVID MORTALITY

Children and young people have almost zero risk of death from COVID. 99.95% of individuals below 70 survive if infected. Survival is even higher for healthy individuals. 95% of deaths occur with one or more serious health problems.

EMERGENCY USE AUTHORIZATION

Conditions for vaccine EUA:
> The disease caused by the virus is life-threatening.
> There is no treatment.
COVID can be serious for a small high-risk group. Treatment protocols have been available since August 2020.

ASYMPTOMATIC SPREAD

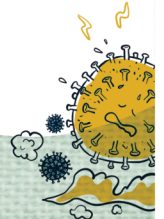

Asymptomatic 'cases' transmit a very low viral load, facilitating population inoculation, which is protective, rather than causing severe disease.

COVID VACCINES

COVID-19 vaccines may be offered to high-risk individuals who are not recovered from COVID. Informed consent is essential. There is an alarming signal in the adverse event reporting systems around the world of serious adverse events.

TRANSMISSION
SARS-CoV-2 is mainly spread through tiny aerosol droplets (airborne) that remain suspended in the air for days. Transmission is most common in indoor settings with a high amount of circulating viruses, such as in hospitals and nursing homes.

PCR TESTS

The PCR test is not designed to diagnose infectiousness or illness. It merely detects SARS-CoV-2 genetic material, dead or alive.

FEAR AND COURAGE

Psyops have allowed fear to go viral.

"Courage [is] not the absence of fear but the triumph over it"
Nelson Mandela
